Self-Injurious Behavior in Intellectual Disabilities gives a broad overview of the literature in the area of self-injurious behavior in people with intellectual disabilities, but most of the text is dedicated to the review of the behavioral and biological research in this field. In fact, it is our view that the most promising heuristic approach for the advancement of our understanding of this phenomenon and for its management and treatment is likely the bio-behavioral perspective in which behavior can be studied at the intersect of learning and the biological bases of behavior. We propose an overarching heuristic model, which we call the Gene-Brain-Behavior Model of Self-Injurious Behavior that presents a platform to integrate disparate, and previously isolated scientific approaches. Written by 3 authors to provide cohesive coverage Bridges the gap between psychological behavior and psychiatry Examines the overlap between intellectual disabilities and developmental disabilities

As the first title in the new series, New Directions in Communication Disorders Research: Integrative Approaches, this volume discusses a unique phenomenon in cognitive science—single-word reading—which is an essential element in successful reading competence. Single-word reading is an interdisciplinary area of research that incorporates phonological, orthographic, graphemic, and semantic information in the representations suitable for the task demands of reading. Editors Elena L. Grigorenko and Adam J. Naples have organized a collection of essays written by an outstanding group of scholars in order to systematically sample research on this important topic, as well as to describe the research within different experimental paradigms. Single-Word Reading provides an introduction to unfamiliar areas of research, and is an inspiration for future study. The introductory chapter sets up a contextual stage for connections between spoken and written word processing, the stage-based nature of their development, and the role of education. Succeeding chapters address visual word processing; the role of morphology in word recognition; the role of lexical representation; the biological bases of single-word reading and related processes; and more. Reading researchers will take interest in this substantial book, as will professionals and practitioners linked to the teaching of reading in the departments of school psychology, special education, communication disorders, neuroscience, cognitive science, linguistics, and reading.

Youth crime and youth violence blights our communities and shapes the lives of many, whether they are victims, perpetrators or family members. This book examines the application of psychological thinking and practice when working with young people who display high risk behaviours across a broad range of forensic mental health settings in the UK. It provides an up-to-date account of current thinking and practice in the field and the challenges of applying effective psychological approaches within forensic settings for young people. The contributors to *Young People in Forensic Mental Health Settings* are drawn from a range of environments including universities, youth offending services, secure in-patient settings, young offender institutions, Community Forensic Child and Adolescent Mental Health Services (F-CAMHS), and secure children's homes. This volume serves as an important platform for debate and as a forum for discussing the future delivery of psychologically informed services, intervention and mental health provision with young people who display high-risk behaviours.
