Labyrinth and Piano Key Weirs

Labyrinth spillways are almost as old as dam engineering. In spite of the fact that they appear as a very good technical-economical compromise, only 0.1% of large dams are equipped with such weirs. The main reason for this is that traditional labyrinth weirs usually cannot be installed on top of concrete gravity dams as they require a large foundat

Labyrinth and Piano Key Weirs II

Dam engineering is currently experiencing a strong revival of labyrinth oriented weirs. Labyrinth weirs, with a repetitive constructional character and an increased specific discharge capacity, are a very good technical-economical compromise. The concept of Piano Key Weir (PKW), with alveoli developed in overhangs from a reduced support area, enables the installation of non-linear crests at the top of concrete dams. As a result it eliminates the main drawback of classical labyrinth weirs, and enables their use to rehabilitate numerous existing dams. Since the first implementation of piano key weirs by Electricité de France on Goulours dam (France) in 2006, at least eight PKWs have been built in France, Vietnam and Switzerland. Their operation over a few years has already provided the first prototype data. Other projects are under study, construction or planning in varied countries. On another hand, research programs are under progress all over the world. Following a first edition in 2011, *Labyrinth and Piano Key Weirs II – PKW 2013* collects up-to-date contributions from people with various backgrounds, from engineers and researchers to academics. Summarizing the last developments on labyrinth oriented weirs, the book constitutes the state-of-the-art in research and application of piano key weir solutions, and will be invaluable to professionals and scientists interested in Dams Engineering.

Engaa Practice Papers

Practice is the key to success in the ENGAA Whilst there are many ways to improve your question answering, you cannot be fully prepared until you have worked through authentic questions under the simulated environment of the real test. That's why UniAdmissions produced these mock papers, spanning 100 pages, and including 150 questions. Working through these 2 practice tests under exam conditions will build your familiarity with the test format. Using the fully worked solutions you can fine-tune your performance before test day arrives to ensure you perform to the best of your ability. Published by the UK's leading University Admissions Company, this fully up-to-date resource contains all the latest question styles in the test, as written by our specialist test tutors. Practicing with these papers will allow you to rapidly improve your test scores and approach the real exam with confidence and gain the score you deserve.

Probabilistic Safety Assessment in the Chemical and Nuclear Industries

In addition to presenting methodology, it shows how to identify accident vulnerability in the two industries. It reviews the causes of the two major nuclear accidents and many fatal accidents in the chemical industry, including Bhopal. Many examples of applications of PSA to both industries are presented. \"--BOOK JACKET. \ "Problems are included at the end of many chapters with answers at the back of the book.\ "-- Jacket.

Negotiating for Water Resources

Over 90 per cent of the world population lives in countries that share a river basin with others. Freshwater resources are scarce and different nations, actors and users compete for limited resources in transboundary river basins; often conflicting with each other. Water is a resource with no substitute: it cannot be secured in sufficiently large quantities through long-distance trade deals; and, due to the interconnectivity of the hydrological system, the actions of one country in its water management have a direct bearing on the interests of neighbouring countries. For instance, in the Mekong River Basin, current hydropower and navigation developments in certain countries impact on traditional sources of income such as fisheries, and rice production in others. These kinds of changes in water use have given rise to conflict between countries in that region and others, but have also led, in some cases, to greater cooperation. The past few decades have seen a number of new agreements about the sharing of river resources and cooperation between riparian states. Negotiating for Water Resources explores the drivers of conflict and cooperation between states in transnational river basins. Drawing on extensive fieldwork and interviews on the Mekong, Danube and La Plata River Basins, the book provides a three level analysis across three case studies, including the regional framework (EU, ASEAN and Mercosur), the River Basin Organisations (ICPDR, MRC and CIC) and the micro-level. The key question of the book is: To what extent do power asymmetries prevent or inhibit cooperation between riparian states over water resources? This is linked to the question of how institutions contribute to mitigate competition for natural resources and how states interact in a multilateral arena. Overall, the book argues that cooperation in transboundary river basins is possible even where there are asymmetric power relations, challenging realist assumptions about competition and conflict over resources.

The Hydropolitics of Dams

The Hydropolitics of Dams charts the troubled waters of 'heavy engineering' approaches to ecosystem management, exploring the history, benefits and problems of large dams. It then explores diverse ecosystem-based approaches to management of human interactions with the water cycle, concluding that a synthesis of approaches is needed in future. The book also addresses political, economic and legal dimensions of water management. Featuring case studies from China, India and South Africa, this insightful new book argues that there are more appropriate physical and social technologies that can help to sustainably provide access to clean water for all.

Decision Management: Concepts, Methodologies, Tools, and Applications

The implementation of effective decision making protocols is crucial in any organizational environment in modern society. Emerging advancements in technology and analytics have optimized uses and applications of decision making systems. Decision Management: Concepts, Methodologies, Tools, and Applications is a compendium of the latest academic material on the control, support, usage, and strategies for implementing efficient decision making systems across a variety of industries and fields. Featuring comprehensive coverage on numerous perspectives, such as data visualization, pattern analysis, and predictive analytics, this multi-volume book is an essential reference source for researchers, academics, professionals, managers, students, and practitioners interested in the maintenance and optimization of decision management processes.

Digital Supply Chain, Disruptive Environments, and the Impact on Retailers

With the world having been plunged into uncertainty during the COVID-19 pandemic, a critical issue for senior management is stabilizing their supply chain to a consistent flow of components and materials. Even before the advent of the COVID-19 pandemic, supply chain complexity had been an increasingly “hot” topic. Add to that the complexity of new tariff restrictions, port congestion, regional conflicts, and geopolitical events and disruptions due to international conflict, and it is apparent that securing access to materials and critical resources is not without difficulty, and forecasting demand is even harder. *Digital Supply Chain, Disruptive Environments, and the Impact on Retailers* brings together the field’s latest best practices on digital supply chain enablement, giving business professionals a comprehensive framework to ensure successful supply chain business transformation programs. Covering topics such as business planning, digital transformation, and volatile demand, this premier reference source is an excellent resource for managers, directors, vice presidents, supply chain executives, IT directors, consultants, students and educators of higher education, librarians, researchers, and academicians.

Since the first implementation by Electricité de France on the Goulours dam (France) in 2006, the Piano Key Weir has become a more and more applied solution to increase the discharge capacity of existing spillways. In parallel, several new large dam projects have been built with such a flood control structure, usually in combination with gates. Today, more than 25 Piano Key Weirs are in operation or under construction all over the world. More than 15 years of research and development have enabled detailed investigations of the hydraulic and structural behaviour of the Piano Key Weir complex structure and have provided more and more accurate design equations. Following the proceedings of the first two workshops held in Liege (Belgium – 2011) and Paris (France – 2013), *Labyrinth and Piano Key Weirs III* collects the contributions presented by people with varied background, from researchers to practitioners, at the 3rd International Workshop on Labyrinth and Piano Key Weirs - PKW 2017 (22-24 February 2017, Qui Nhon, Vietnam). The papers, reviewed and accepted by an International Scientific Committee, summarize the current state-of-the-art on Piano Key Weirs from a theoretical to a practical point of view, and present most of the main projects in operation or under construction. *Labyrinth and Piano Key Weirs III* is thus a reference for students, practitioners and researchers interested in Dams Engineering.

Concrete repair continues to be a subject of major interest to engineers and technologists worldwide. The concrete repair budget for the UK alone currently runs at some UKP 220 per annum. Some estimates have indicated that, worldwide, in 2010 the expenditure for maintenance and repair work will represent about 85% of the total expenditure in the co

Ischemic or idiopathic mitral valve disease (so called secondary mitral valve regurgitation) is a rather new concept. This topic is deeply polarizing the attention of the cardiologist and cardiothoracic community. Although there is an impressive amount of efforts to understand the etiology, mechanism, treatment and prognostic factors, still clear indications and guide-lines are missing. Therefore this group of patients lie in a grey-area and physicians looking after them cannot count on proper recommendations. The main purpose of this book is to review the most relevant knowledge about secondary mitral valve regurgitation, from the anatomy, definition, classification, diagnosis and prevalence to the up-to-date surgical and medical management.

Secondary Mitral Valve Regurgitation

This book deals with collaborative planning, an approach to supply chain planning which aims to coordinate planning tasks of independent supply chain partners while respecting their local decision authority. It gives an introduction to collaborative planning, shows how it is embedded in the broader subject matter of supply chain management, and reviews findings of related literature. At its core, it provides a step-by-step description of a negotiation-based, practice-oriented approach to collaborative planning at the medium-term level of master planning between two supply-chain partners, a supplier and a single customer. Subsequently, this basic concept is extended to cover supply chains with multiple partners and planning on a rolling basis. Implications of collaborative planning on supply contracts are sketched out, and incentives for cooperative behavior by the supply-chain partners are analyzed by applying concepts of game theory.

Real World Psychology balances comprehensive coverage of the key concepts in introductory psychology with a concise presentation style and engages students with current and interesting research that explores

these concepts in real-life contexts. Real World Psychology features the incomparable author team of Karen Huffman (Palomar College) and Catherine Sanderson (Amherst College) who create an outstanding text that is appealing to students and instructors at a wide range of academic institutions. The new edition has been thoroughly updated and features a new focus on Scientific Thinking and Practical Applications underscoring the fact that connecting the principles of psychological science to everyday life is critical to student engagement, and ultimately key to their success – not only in the introductory psychology course, but in whatever their chosen field of study and in everyday life. Students will leave the course with an appreciation of how a basic, yet scientific understanding of human behavior can benefit them in their studies, in their personal lives, and in their professional endeavors.

Companies across different industries are launching technology-enabled (digital) business transformation programs to improve their strategic, tactical, and operational supply chain processes. The greatest challenges that they are facing include the lack of preparation and knowledge of the digital transformation life cycle and poorly addressing or neglecting the “people-related” aspects of them. Therefore, improvement initiatives have been short-lived or incomplete, and expected business benefits have not been achieved or materialized. Technology Optimization and Change Management for Successful Digital Supply Chains is a pivotal reference source that provides vital research on the application of digital business transformation programs to improve strategic, tactical, and operational supply chain processes. While highlighting topics such as maturity models, predictive analysis, and communication planning, this publication explores the limited literature in the field of digital supply chain optimization and business transformation, and complements it with practical and proven tactics from the industry. This book is ideally designed for program managers, engineers, students, and practitioners seeking current research on the field’s latest best practices on digital supply chain enablement.

Collaborative Planning in Supply Chains

The ACM Workshop on Security and Privacy in Digital Rights Management is the first scientific workshop with refereed proceedings devoted solely to this topic. The workshop was held in conjunction with the Eighth ACM Conference on Computer and Communications Security (CCS-8) in Philadelphia, USA on November 5, 2001. Digital Rights Management technology is meant to provide end-to-end solutions for the digital distribution of electronic goods. Sound security and privacy features are among the key requirements for such systems. Fifty papers were submitted to the workshop, quite a success for a first-time workshop. From these 50 submissions, the program committee selected 15 papers for presentation at the workshop. They cover a broad area of relevant techniques, including cryptography, system architecture, and cryptanalysis of existing DRM systems. Three accepted papers are about software tamper resistance, an area about which few scientific articles have been published before. Another paper addresses renewability of security measures. Renewability is another important security technique for DRM systems, and I hope we will see more publications about this in the future. I am particularly glad that three papers cover economic and legal aspects of digital distribution of electronic goods. Technical security measures do not exist in a vacuum and their effectiveness interacts in a number of ways with the environment for legal enforcement. Deploying security and anti-piracy measures adequately requires furthermore a good understanding of the business models that they are designed to support.

Technology Optimization and Change Management for Successful Digital Supply Chains

Effective measurement of the composition and properties of petroleum is essential for its exploration, production, and refining; however, new technologies and methodologies are not adequately documented in much of the current literature. *Analytical Methods in Petroleum Upstream Applications* explores advances in the analytical methods and instrumentation that allow more accurate determination of the components, classes of compounds, properties, and features of petroleum and its fractions. Recognized experts explore a host of topics, including: A petroleum molecular composition continuity model as a context for other analytical measurements A modern modular sampling system for use in the lab or the process area to collect and control samples for subsequent analysis The importance of oil-in-water measurements and monitoring The chemical and physical properties of heavy oils, their fractions, and products from their upgrading Analytical measurements using gas chromatography and nuclear magnetic resonance (NMR) applications Asphaltene and heavy ends analysis Chemometrics and modeling approaches for understanding petroleum composition and properties to improve upstream, midstream, and downstream operations Due to the renaissance of gas and oil production in North America, interest has grown in analytical methods for a wide range of applications. The understanding provided in this text is designed to help chemists, geologists, and chemical and petroleum engineers make more accurate estimates of the crude value to specific refinery configurations, providing insight into optimum development and extraction schemes.

Epidemiology and Prevention of Cardiovascular Disease: A Global Challenge, Second Edition provides an in-depth examination of epidemiologic research and prevention measures for the full range of cardiovascular diseases (CVD). This authoritative text on the world's leading causes of death describes in detail the nature of atherosclerotic and hypertensive diseases--including their determinants, prevention and control, as well as policies for intervention in community and clinical settings. This Second Edition is fully updated, more extensively referenced and expanded to include new information about the public health dimensions of CVD prevention, exploring the basis of public health decisions and the process by which decision-making bodies develop guidelines and recommendations. *Epidemiology and Prevention of Cardiovascular Diseases: A Global Challenge, Second Edition* is the essential text for any student or practitioner concerned with global cardiovascular health.

Failure of Teton Dam

Insight into the role of hormones, particularly estrogen and testosterone, in health and disease etiology - including interactions with other hormone pathways - has dramatically changed. Estrogen and androgen receptors, with their polymorphisms, are key molecules in all tissues and are involved in a number of homeostatic mechanisms but also pathological processes including carcinogenesis and the development of metabolic and neurological disorders such as diabetes and Alzheimer's disease. Endocrine disrupting chemicals (EDCs) can interfere with the endocrine (hormone) systems at certain dosages and play a key role in the pathology of disease. Most known EDCs are manmade and are therefore an increasing concern given the number commonly found in household products and the environment. This book will cover the mechanisms of EDC pathology across the spectrum of disease, as well as risk assessment and government

and legal regulation to provide a holistic view of the current issues and cutting-edge research in the topic. With contributions from global leaders in the field, this book will be an ideal reference for toxicologists, endocrinologists and researchers interested in developmental biology, regulatory toxicology and the interface between environment and human health.

Handbook of Research on Assessment Technologies, Methods, and Applications in Higher Education

The St. Johns River is the longest river in Florida, containing extensive freshwater wetlands, numerous large lakes, a wide estuarine channel, and a correspondingly diverse array of native flora and fauna. Water resource management in the river's watershed is the responsibility of the St. Johns River Water Management District (the District). The District must provide water for the region's 4.4 million residents as well as numerous industrial and agricultural users, all while protecting natural systems within the river basin. With population growth in the watershed expected to surpass 7.2 million in 2030, the District, through its water resources planning process, has begun to identify alternative sources of water beyond its traditional groundwater sources, including the potential withdrawal of 262 million gallons per day from the St. Johns River. To more comprehensively evaluate the environmental impacts of withdrawing this water from the river, the District embarked on a two-year Water Supply Impact Study (WSIS), and requested the involvement of the National Research Council. The present volume reviews the Phase I work of the WSIS and provides recommendations for improving Phase II.
