The Exxon-Mobil Merger

Firm-to-firm relationships, along with the overall structure of industry, have changed markedly over the past decades. Replacing the model of vertical integration with one of global business, firms have started to outsource more by using a wider global network. At the same time, they have begun to increase their control and coordination along the value chain to remain competitive, blurring the boundaries between companies. Understanding the nature of the firm and its role in coordinating the supply chain will help firms to better define global competitive strategies.. The challenges that lie ahead for global business render obsolete the traditional model of procuring each service without long-term supply chain management. Current trends suggest that in the future there will be even deeper supply chain integration in most industries. The Nature of the Firm in the Oil Industry aims to facilitate the understanding of 'the firm' via the analysis of the specific relationship between international oil companies, which are among the world's biggest firms and which act as 'core system integrators', and the oil services companies, which help to find, extract, produce and distribute oil along the petroleum industry supply chain. This relationship serves as an example of deep integration by core system integrators and provides insights into the change in the nature of the firm in the era of modern globalization. Aimed at researchers and academics, The Nature of the Firm in the Oil Industry offers a thorough examination of this relationship in an effort to shed light on the nature of the firm, both in the oil industry and in global business today. It is a humble attempt to better understand the firm in a crucial industry.

How is the future world energy demand to be met? The rates of use of the fossil fuels — coal, oil and natural gas — are increasing all over the world. The remaining stocks are finite and are not renewable. This book considers the various options of renewable energy, including water energy, wind energy and biomass, solar thermal and solar photovoltaic energy. And should the nuclear option remain open? The work also examines the environmental implications and economic viability of all fossil and renewable sources, introduces more distant future options of geothermal energy and nuclear fusion, and discusses a near-future energy strategy.

Using the principles and tools of sociology presented in his university course, Chris Dawson challenges the reader to reconsider the social reality of our society. This book exposes inconsistencies and deceptions in the conventional portrayal of America's experiment in democracy. His provocative social commentary explores the role of our military, the culture of fear, strategies in the war on terror, the excesses of corporate power, and our misconceptions about crime. He speaks of social inequality, social and racial group divisions, and offers unconventional views about education, medicine, universal healthcare, and the origins of religion. The doubts he raises will merit your serious reflection.

Approximately 3 million gallons of oil or refined petroleum products are spilled into U.S. waters every year. Oil dispersants (chemical agents such as surfactants, solvents, and other compounds) are used to reduce the effect of oil spills by changing the chemical and physical properties of the oil. By enhancing the amount of oil that physically mixes into the water, dispersants can reduce the potential that a surface slick will contaminate shoreline habitats. Although called for in the Oil Pollution Act of 1990 as a tool for minimizing the impact of oil spills, the use of chemical dispersants has long been controversial. This book reviews the adequacy of existing information and ongoing research regarding the effectiveness of dispersants as an oil spill response technique, as well as the effect of dispersed oil on marine and coastal ecosystems. *Oil Spill Dispersants* also includes recommended steps for policy makers faced with making hard choices regarding the use of dispersants as part of spill contingency planning efforts or during actual spills.
