You Call The Shots Introduction

Calling the Shots

An increasing number of parents are refusing vaccines, believing vaccines pose greater risks than benefits to their children. Given the certainty of the medical community that vaccines are safe and effective, many wonder how such parents, who are most likely to be white, have high levels of education, and have the greatest access to healthcare services and resources, could hold such beliefs? Reich has been following the issue of vaccine refusal for over a decade, and examines how parents who opt out of vaccinations see their decision: what they fear, what they hope to control, and what they believe is in their child's best interest. -- adapted from back cover

If you want to fix your rebellious and disrespectful child, you need to start by fixing yourself. Are your kids pummeling you with demands and bossing you around with impunity? Have your once-precious preschoolers become rebellious, entitled, and disrespectful to authority? While there are plenty of so-called experts who might try to validate your convictions that you have done all you can to “fix” your “difficult” children, the hard truth is, they're not doing you any favors by placing the responsibility solely on your children. Parenting struggles rarely originate from just one side. Instead, they erupt at the volatile intersection of a child's personality with a parent's own insecurities and behaviors. In *When Kids Call the Shots*, therapist and parenting expert Sean Grover untangles the forces driving family dysfunction, and helps parents assume their leadership roles once again. Parents will discover: Three common bullying styles used by kids Parenting styles that contribute to power balances Critical testing periods in a child's development Coping mechanisms that backfire Personalized plans for calmly exerting authority in any scenario The solution to any problem begins with learning to control what you can control. Lately, our nation's strategy for improving our schools is mostly limited to \"getting tough\" with teachers. Blaming teachers for poor outcomes, we spend almost all of our energy trying to control teachers' behavior and school operations. But what if all of this is exactly the opposite of what is needed? What if teachers are the answer and not the problem? What if trusting teachers, and not controlling them, is the key to school success? Examining the experiences of teachers who are already trusted to call the shots, this book answers: What would teachers do if they had the autonomy not just to make classroom decisions, but to collectively--with their colleagues--make the decisions influencing whole school success? Decisions such as school curriculum, how to allocate the school budget, and whom to hire. Teachers with decision-making authority create the schools that many of us profess to want. They individualize learning. Their students are active (not passive) learners who gain academic and life skills. The teachers create school cultures that are the same as those in high-performing organizations. They accept accountability and innovate, and make efficient use of resources. These promising results suggest: it's time to trust teachers.

Trusting Teachers with School Success

Vaccines are among the most safe and effective public health interventions to prevent serious disease and

death. Because of the success of vaccines, most Americans today have no firsthand experience with such devastating illnesses as polio or diphtheria. Health care providers who vaccinate young children follow a schedule prepared by the U.S. Advisory Committee on Immunization Practices. Under the current schedule, children younger than six may receive as many as 24 immunizations by their second birthday. New vaccines undergo rigorous testing prior to receiving FDA approval; however, like all medicines and medical interventions, vaccines carry some risk. Driven largely by concerns about potential side effects, there has been a shift in some parents' attitudes toward the child immunization schedule. The Childhood Immunization Schedule and Safety identifies research approaches, methodologies, and study designs that could address questions about the safety of the current schedule. This report is the most comprehensive examination of the immunization schedule to date. The IOM authoring committee uncovered no evidence of major safety concerns associated with adherence to the childhood immunization schedule. Should signals arise that there may be need for investigation, however, the report offers a framework for conducting safety research using existing or new data collection systems.

Are collocations problems or solutions to problems? If you take the perspective of the foreign learner, as in traditional phraseology, they are certainly challenging, and they have therefore been categorized as arbitrary, or even defective, deviations from an assumed norm of full compositionality. This is a paradox because their ubiquity in language and their importance for language proficiency are undisputed. The book provides a critical review of the traditional phraseological approach to collocations with its classical categories and its roots in structural and generative linguistics as well as traditional Russian phraseology. Instead, it proposes a theory of collocations as an independent functional domain, no longer characterized as "odd comings-together of words" that are neither fully compositional nor fully idiomatic. It fills a research gap and should appeal to phraseologists and cognitive linguists as well as psycholinguists, neurolinguists, corpus linguists, PhD-students and other advanced students of linguistics who are interested in exploring collocations as a language resource and may be interested in contributing to it.

Parents have come to depend on vaccines to protect their children from a variety of diseases. Some evidence suggests, however, that vaccination against pertussis (whooping cough) and rubella (German measles) is, in a small number of cases, associated with increased risk of serious illness. This book examines the controversy over the evidence and offers a comprehensively documented assessment of the risk of illness following immunization with vaccines against pertussis and rubella. Based on extensive review of the evidence from epidemiologic studies, case histories, studies in animals, and other sources of information, the book examines: The relation of pertussis vaccines to a number of serious adverse events, including encephalopathy and other central nervous system disorders, sudden infant death syndrome, autism, Guillain-Barre syndrome, learning disabilities, and Reye syndrome. The relation of rubella vaccines to arthritis, various neuropathies, and thrombocytopenic purpura. The volume, which includes a description of the committee's methods for evaluating evidence and directions for future research, will be important reading for public health officials, pediatricians, researchers, and concerned parents.

Childhood immunization is one of the major public health measures of the 20th century and is now receiving special attention from the Clinton administration. At the same time, some parents and health professionals are questioning the safety of vaccines because of the occurrence of rare adverse events after immunization. This volume provides the most thorough literature review available about links between common childhood vaccines—tetanus, diphtheria, measles, mumps, polio, Haemophilus influenzae b, and hepatitis B—and specific types of disorders or death. The authors discuss approaches to evidence and causality and examine the consequences—neurologic and immunologic disorders and death—linked with immunization. Discussion also includes background information on the development of the vaccines and details about the case reports, clinical trials, and other evidence associating each vaccine with specific disorders. This comprehensive volume will be an important resource to anyone concerned about the immunization controversy: public health officials, pediatricians, attorneys, researchers, and parents.

This book brings together over 200 short (very short) plays from the New York production of the acclaimed cult theater hit "Too Much Light Makes the Baby Go Blind," created by Greg Allen, debuted in Chicago in December, 1988, and has been playing to sold out houses ever since. The show presents 30 plays in 60 minutes, 50 weeks a year, to a devoted following. The ensemble of writer-performers generates between two and 12 new plays each week, as dictated by a roll of the dice, creating a constantly changing menu of plays. In 2004, a New York ensemble was formed and the show has been running there since, playing to houses of younger, culturally adventurous audiences as well as seasoned theater-goers. The 225 plays in this volume, culled from more than 1,300 the New York company has generated since 2004, reflect the diversity of 35 current and past ensemble members and the multiplicity of viewpoints and voices they bring to the stage. The material runs the gamut of style, tone, and topic: musical, confession, agit-prop, poetic gesture, physical comedy, puppet theater, audience interrogation, folk song, sex joke, and many more.
